this book is the first detailed biography of ernst mayr he was an architect of the synthetic theory of evolution and the greatest evolutionary biologist since charles darwin he is one of the most widely known biologists of the 20th century

studies in the babi and baha i religions volume 12this is the first and only serious academic treatment of the subject of evolution in the teachings of the bahá'í faith the authors provide an exhaustive discussion of the historical context of abdu l bahá's remarks on and objections to the darwinian theories of his time presenting modern alternatives to contemporary interpretations of his remarkskeven brown's essay investigates the religious controversy that has surrounded the subject of evolution both within christianity and within islam during abdu l bahá's time he provides a valuable summary of the views of those the master called the philosophers of the east then from the perspective of modern science eberhard von kitzing discusses the impact of evolution on the study of biology and suggests that abdu l bahá's teachings have been widely misunderstood this book will expand and deepen discussion on evolution in the bahá'í community

the diversity of living forms and the unity of evolutionary processes are themes that have permeated the research and writing of ernst mayr a grand master of evolutionary biology the essays collected here are among his most valuable and durable contributions that form the basis for much of the contemporary understanding of evolutionary biology

uncommonly good makes a compelling case that intellectual curiosity not only changed europe but launched modernity cleveland plain dealer when columbus first returned to spain from the caribbean he dazzled king ferdinand and queen isabella with exotic parrots tropical flowers and bits of gold inspired by the promise of riches countless seafarers poured out of the iberian peninsula and wider europe in search of spices treasure and land many returned with strange tales of the new world curiosity began to percolate through europe as the new world s people animals and plants ruptured prior assumptions about the biblical description of creation the church long fearful of challenges to its authority could no longer suppress the mantra dare to know noblemen began collecting cabinets of curiosities soon others went from collecting to examining natural objects with fresh eyes observation led to experiments competing conclusions triggered debates the foundations for the natural sciences were laid as questions became more multifaceted and answers became more complex carl linneaus developed a classification system and sent students around the globe looking for specimens museums botanical gardens and philosophical societies turned their attention to nature national governments undertook explorations of the pacific eminent historian joyce appleby vividly recounts the explorers triumphs and mishaps including magellan s violent death in the philippines the miserable trek of the new argonauts across the andes on their mission to determine the true shape of the earth and how two brilliant scientists alexander humboldt and charles darwin traveled to the americas for evidence to confirm their hypotheses about the earth and its inhabitants drawing on detailed eyewitness accounts appleby also tells of the turmoil created in the all societies touched by the explorations this sweeping global story imbues the age of discovery with fresh meaning elegantly charting its stimulation of the natural sciences which ultimately propelled western europe toward modernity

the last fifteen years have been a period of dramatic change both in the world at large and within the fields of ecology and

conservation the end of the cold war the dot com boom and bust the globalizing economy and the attacks of september 11 among other events and trends have reshaped our worldview and the political environment in which we find ourselves at the same time emerging knowledge needs and opportunities have led to a rapid evolution in our understanding of the scientific foundations and social context of conservation correction lines is a new collection of essays from one of our most thoughtful and eloquent writers on conservation putting these recent changes into perspective and exploring the questions they raise about the past present and future of the conservation movement the essays explore interrelated themes the relationship between biological and social dimensions the historic tension between utilitarian and preservationist approaches the integration of varied cultural perspectives the enduring legacy of aldo leopold the contrasts and continuities between conservation and environmentalism the importance of political reform and the need to retool conservation to address twentyfirst century realities collectively the essays assert that we have reached a critical juncture in conservation a correction line of sorts correction lines argues that we need a more coherent and comprehensive account of the past if we are to understand our present circumstances and move forward under unprecedented conditions meine brings together a deep sense of history with powerful language and compelling imagery yielding new insights into the origins and development of contemporary conservation correction lines will help us think more clearly about the forces that have changed and are changing conservation and inspire us to address current realities and future needs

the scopes trial shocked america tennessee schoolteacher john scopes brought the question of teaching evolution in schools to every dinner table and it remains an essential topic in any course on american history the history of education and religious history this volume s lively interpretative introduction provides an analysis of the trial and its impact on the moral fiber of the country and the educational system and examines the race and gender issues that shook out of the debate the

editor has excerpted the crucial exchanges from the trial transcript itself and includes these along with reactions to the trial taken from newspaper reports letters and magazine articles telling political cartoons and evocative photographs add a colorful dimension to this collection while a chronology of events questions for consideration and a bibliography provide strong pedagogical support

while much attention has been focused on perfecting a taxonomy of mental illness the editors of this volume argue that cataloguing normal human behavior is an equally vital if not more daunting task a better understanding of normality will further our understanding of the complexities of psychopathology they maintain because we will have a meaningful yardstick for comparison and evaluation further advancing the evolution of the science of normatology this important volume assembles an impressive array of researchers and clinicians from many fields psychiatry psychotherapy stress research alcoholism research military psychology family studies sociology and forensics to discuss how researchers and practitioners in these disciplines define what is normal and what is pathological the book addresses a broad range of intriguing questions why do some families adapt well despite a host of factors stacked against them is mental health more common in some cultures than in others what psychosocial or biological markers are the best indicators of successfully coping with stress taking into account the vast amount of new empirical data clinical observations and theoretical conceptualization in this field this work is an important contribution to understanding the many variants and types of human behavior that may be subsumed under the heading of normal

although unpredictable and of short duration periods of extreme environmental stress have been found to occur throughout the entire course of evolution this book concentrates on the evolutionary changes that take place during these critical periods

when populations are driven to the extreme limits of resistance accumulating evidence suggests that it is precisely during such moments that fundamental changes in the natural order of systems are likely both in terms of species extinctions and bursts of evolutionary activity this study thus offers much potential for understanding the basic forces underlying the development of life on our planet the book is necessarily multidisciplinary in approach with an emphasis on the interaction between ecology genetics physiology and the study of behavior and development the book concludes with a discussion of the range expansion of species and insightful observations regarding conservation strategies under rapidly changing conditions including those created by environmental pollution
